

# MultiPulse, MultiV, MultiLine TREASURE TROVE

MultiTask photoelectric sensors

**SICK**  
Sensor Intelligence.

# SOUGHT AND FOUND

Specific challenges call for specific solutions, and the search for such solutions is often an arduous one. Fortunately, SICK has already solved the problem for you. Like a treasure-hunter, you might say. This is how real treasures come to light.

## ② MultiV

### Efficiency sought and found

Thanks to its tilted, V-shaped light beam, the MultiV ensures that more reflected light is directed into the receiver than with standard optics. This means much greater efficiency in object detection.

Congratulations: difficulties in detecting reflective transparent, flat or jet-black object surfaces are now a thing of the past.

All the most important things  
together in one package

### Based on the miniature photoelectric sensor W4-3

With its best-in-class functions, the miniature photoelectric sensor W4-3 forms the ideal basis for the MultiTask photoelectric sensors. High performance PinPoint technology, optimal ambient light suppression and background suppression, and reliable object detection – all packed into one compact housing.

## ① MultiPulse

### Switch to autopilot

The MultiPulse features a unique self-monitoring function, the Watchdog function, which uses an oscillating, pulsed emitted light.

Stage victory: in every kind of application for which a verified and confirmed sensor signal is required and reliable functioning is essential.

STARTING  
POINT

③

### MultiLine

#### Twice the reason to celebrate

Two photoelectric proximity sensors in one housing mean two parallel light beams and thus twice the reliability.

Congratulations: you have found the solution for detecting objects with a variety of holes, punch-outs and contours.

DESTINATION

#### All good things come in threes

So three treasures see the light of day, showing that solutions are often closer than one might think. Based on the successful miniature photoelectric sensor W4-3 with its extraordinary range of features, these MultiTask photoelectric sensors emerge as true gems of automation technology. Specially developed for specific applications, their outstanding performance sets them apart.

And through this solution-oriented approach, SICK proves once again that:

We  
simply detect  
any object.

## COMMON BASIS

Its extraordinary range of features make the W4-3 product family the best in its class.

## OPTICS BRING DIFFERENCES TO LIGHT

### MultiPulse

- Highly concentrated light spot
- 2 Hz / 10 Hz technology
- Watchdog function
- Sensing range 30 mm ... 150 mm
- Light spot size Ø 7 mm

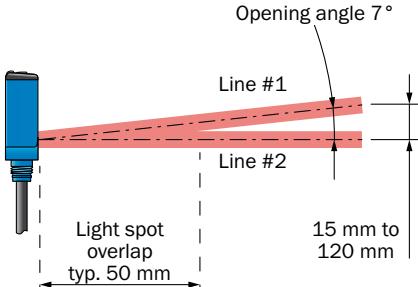

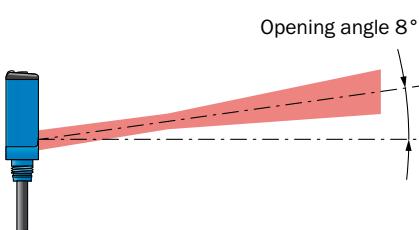

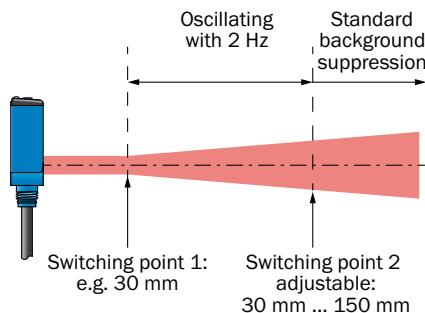

### MultiV

- Laser-like, line-shaped light spot
- V-optics
- Sensing range 5 mm ... 50 mm
- Light spot size 3 mm x 20 mm

### MultiLine

- Two line-shaped light spots
- Sensing range 15 mm ... 120 mm
- Light spot size (depending on type) 3 mm x 25 mm (40 mm) or 5 mm x 22 mm (40 mm)

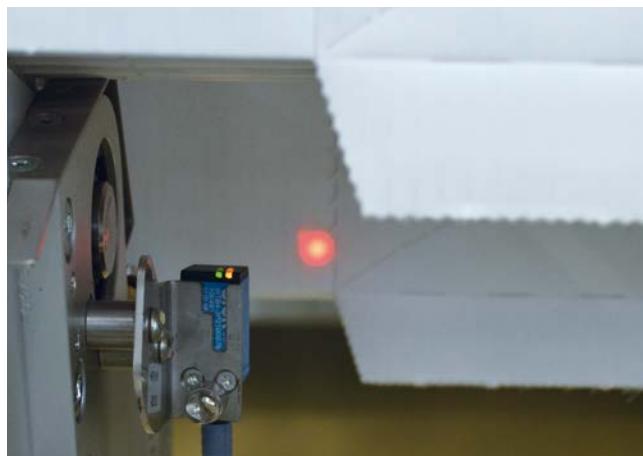

## TYPICAL APPLICATIONS

Special optics variants offer targeted solutions.

### MultiPulse

#### Highly reliable detection of all types of objects

With its integrated Watchdog function, MultiPulse ensures, when monitoring a machine opening, that the opening is definitely covered by an object (e.g. unfolded cardboard packaging, plastic tub, sheet metal, etc.) The oscillation is generated using 2 Hz / 10 Hz technology. A feedback loop only occurs when an object is present in the detection range.

### MultiV

#### Detection of films, transparent and irregular objects

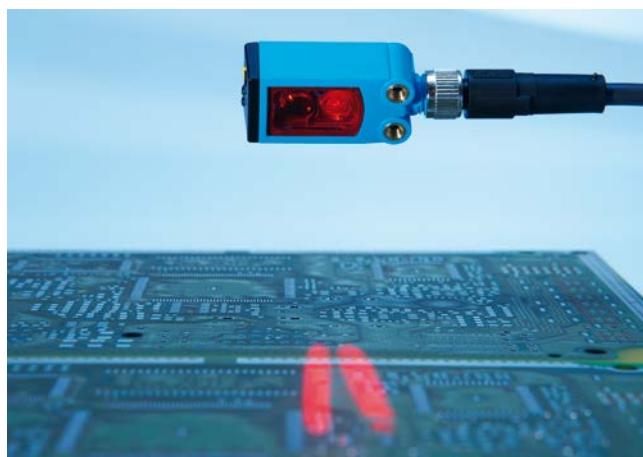

Using its V-optics, MultiV is able to detect objects such as films, jars, glass edges and electronic cards. It reliably detects even highly light-absorbent and poorly remitting surfaces such as solar cells. The V-optics reflect the light diffusely from the object in all directions (including the sender LED). In this way, a lot more reflected energy reaches the receiver.

### MultiLine

#### Detection of shiny objects and objects with notches

MultiLine, with its two parallel light beams, is ideal for detecting objects with holes and notches (e.g. electronic cards). And its double detection system reliably detects even very flat and shiny objects on conveyor belts (e.g. blister packaging, shiny bags etc.) This is because when the signal from one beam is interrupted due to the passage of an object, the output remains set. Only when both beams no longer recognize an object does MultiLine switch off.

## SWITCH TO AUTOPILOT

### Product description

In addition to the presence signal itself, the MultiPulse sensor also delivers freedom from errors as well as the status of the application. As a result, the control is informed that the sensor has definitely detected the object and that there are no defects such as wire breakage or a sensor malfunction. A second switching

point means that sensor manipulation is virtually impossible. This is achieved thanks to a simple resonant circuit that is established by the object, optics, and sensor electronics. The control monitors the resonant circuit, which oscillates at 2 Hz or 10 Hz. The sensor only has one connecting wire.

### At a glance

- Object detection and sensor monitoring
- Verification that the object is present and the sensor has not experienced a malfunction
- The space-saving miniature housing allows the sensor to be integrated in the tightest machine environments

- Precise background suppression ensures that all types of objects are reliably detected regardless of their surface and properties
- Operating range from 3 to 150 mm
- A range of variants with and without settings, line-shaped light spot, and window function (30 mm ... 150 mm) are available

### Your benefits

- Increase in productivity through sensor monitoring. The machine controller monitors the status of the sensor including wire breakage and short-circuits.
- Reduction in costs: object detection and sensor monitoring takes place via a single output

- High operational safety and reliability thanks to SIRIC® chip technology from SICK
- Quick and easy commissioning due to bright and highly visible PinPoint light spots

## EFFICIENCY SOUGHT AND FOUND

### Product description

Precise object detection thanks to technology fusion: SICK background suppression plus PinPoint LED technology with clearly defined line-shaped light spot and V-optics. No object will be able to escape precise and reliable detection any longer. No matter what tricks the

object may play – whether it is highly transparent, reflective, or dark black – the MultiV can detect anything. What's more, the MultiV can be integrated in a space-saving manner as a miniature sensor without reflector or for use in a through-beam system.

### At a glance

- Reliable detection of flat, transparent, and reflective objects such as displays, glasses, and a whole host of metal parts
- Gaps and holes in the objects do not cause the sensor to shut down
- Detection of flat objects on conveyor belts
- The space-saving miniature housing allows the sensor to be integrated in the tightest machine environments

- Precise, reliable background suppression ensures that all types of objects are reliably detected regardless of their surface and properties
- Precise switching points with repeat accuracy < 1 mm
- Optimal operating range from 15 mm to 30 mm

### Your benefits

- Simple and cost-effective application, as complex detection tasks can be reliably completed using a BGS sensor

- User-friendly and high-precision adjustment of the sensing range thanks to a 5-turn potentiometer
- Rapid and precise alignment thanks to a shiny bright and line-shaped light spot with PinPoint technology

## TWO IS BETTER THAN ONE

### Product description

The MultiLine sensor: two sensors in one housing with an intelligent logical linking. The MultiLine sensor proves itself in challenging situations as a

rugged detector of flat and structured objects with an availability not achieved until now.

### At a glance

- Two logical and intelligently linked sensors with background suppression in one miniature housing offer the highest ruggedness for object detection
- Consistent, reliable detection of structures and perforated objects such as e-cards

- Consistent, reliable detection of reflective and irregular objects such as blister packs and soup sachets on conveyor belts
- Maximum sensing range 120 mm
- Simple adjustment via teach-in button

### Your benefits

- The MultiLine sensor facilitates faster production sequences since the distances between objects can be reduced
- The sensor position no longer needs to be modified for format changes since the sensor is able to detect objects independently of their position. This saves time and money
- The reliable signal of the sensor from the arriving to the departing edge places less demands on the control software since it no longer needs to be debounced or evaluated

- The MultiLine sensor offers high process reliability because all objects are detected independently of their structure, geometry and surface properties
- And placing the sensor into operation is as easy as pressing a button. A fast and reliable commissioning without complicated operating algorithms is thus given

SIRIC®  
optical ASIC

## WWW.MYSICK.COM – SEARCH ONLINE AND ORDER

Search online quickly and safely - with the SICK "Finders"

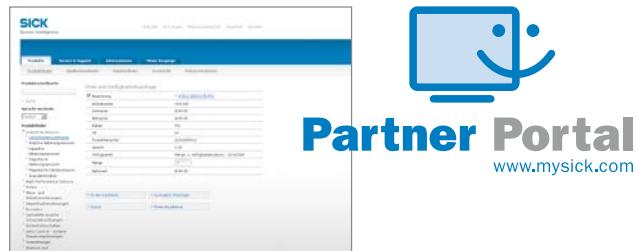

**Product Finder:** We can help you to quickly target the product that best matches your application.

**Applications Finder:** Select the application description on the basis of the challenge posed, industrial sector, or product group.

**Literature Finder:** Go directly to the operating instructions, technical information, and other literature on all aspects of SICK products.

These and other finders at: [www.mysick.com](http://www.mysick.com)

Efficiency – with the E-Commerce-Tools from SICK

### Find out prices and availability

Determine the price and possible delivery date of your desired product simply and quickly at any time.

### Request or view a quote

You can have a quote generated online here. Every quote is confirmed to you via e-mail.

### Order online

You can go through the ordering process in just a few steps.

## FOR SAFETY AND PRODUCTIVITY: SICK LIFETIME SERVICES

SICK LifeTime Services is a comprehensive set of high-quality services provided to support the entire life cycle of products and applications from system design all the way to upgrades. These services increase the safety of people, boost the productivity of machines and serve as the basis for our customers' sustainable business success.

### Consulting & Design

Globally available experts for cost-effective solutions

### Product & System Support

Fast and reliable, by telephone or on location

### Verification & Optimization

Checks and recommendations for increased availability

### Upgrade & Retrofits

Uncovers new potential for machines and systems

### Training & Education

Employee qualification for increased competitiveness

## SICK AT A GLANCE

SICK is a leading manufacturer of intelligent sensors and sensor solutions for industrial applications. With more than 6,500 employees and over 50 subsidiaries and equity investments as well as numerous representative offices worldwide, we are always close to our customers. A unique range of products and services creates the perfect basis for controlling processes securely and efficiently, protecting individuals from accidents and preventing damage to the environment.

We have extensive experience in various industries and understand their processes and requirements. With intelligent sensors, we can deliver exactly what our customers need. In application centers in Europe, Asia and North America, system solutions are tested and optimized in accordance with customer specifications. All this makes us a reliable supplier and development partner.

Comprehensive services round out our offering: SICK LifeTime Services provide support throughout the machine life cycle and ensure safety and productivity.

For us, that is "Sensor Intelligence."

### **Worldwide presence:**

Australia, Austria, Belgium/Luxembourg, Brazil, Czech Republic, Canada, China, Denmark, Finland, France, Germany, Great Britain, Hungary, India, Israel, Italy, Japan, Mexico, Netherlands, Norway, Poland, Romania, Russia, Singapore, Slovenia, South Africa, South Korea, Spain, Sweden, Switzerland, Taiwan, Turkey, United Arab Emirates, USA
